

SensorPresion::procesarLectura

SensorTemperatura::  
procesarLectura

ListaSensor::estaVacia

```
graph LR; A[SensorPresion::procesarLectura] --> C[ListaSensor::estaVacia]; B[SensorTemperatura::procesarLectura] --> C;
```

The diagram illustrates a dependency or relationship. Two boxes on the left, representing methods from different sensor classes, have arrows pointing to a single box on the right. The top box is 'SensorPresion::procesarLectura' and the bottom box is 'SensorTemperatura::procesarLectura'. Both arrows point to a box labeled 'ListaSensor::estaVacia', which is shaded gray. This suggests that both processing methods interact with or depend on the state of the 'ListaSensor' object, specifically its 'estaVacia' property.
